Subject: Microsoft Settlement

This letter is in response to the proposed settlement between Microsoft and the United States Government and 9 states.

After reading the terms of the proposed settlement I believe that the settlement will provide for a fair and equitable manner in ensuring that Microsoft does not further abuse its market power but still allowing OEMs, ISVs and others the information that they need to work with Microsoft products.

As a professional software developer I would like to see a speedy resolution to the case against Microsoft so that I can work without fear of changes to the underlying operating system which my code is dependent upon.
